

In the Claims:

The following listing of claims supersedes all prior listings of claims submitted in this application.

Listing of Claims:

1. (Cancelled)
2. (Currently Amended) A nucleic acid molecule encoding a chimeric TNF α ligand polypeptide having a CD154 Domain III and a TNF α Domain IV, wherein:
 - (a) the Domain III lacks a metalloproteinase cleavage site present in CD154; and,
 - (b) the Domain IV binds to a TNF receptor;wherein the encoded chimeric polypeptide is more resistant to cell membrane cleavage into soluble TNF α than are native human pro-TNF α and human pro-TNF α lacking a the TACE mmp recognition site spanning cleavage site between Val77 and Pro88 of native human TNF α , when expressed in HeLa, 293, A549, COLO205, HCT[[-]15, BT[[-]20 or HT1080 cells.
3. (Previously Presented) The nucleic acid molecule of claim 2 further comprising a polynucleotide that encodes Domain II fragment of CD154.
4. (Previously Presented) The nucleic acid molecule of claims 2 or 3, further comprising a polynucleotide that encodes a Domain I fragment of CD154.
- 5-7. (Cancelled)
8. (Cancelled)

In re Application of:

Charles E. Prussak *et al.*

Application No.: 10/006,305

Filed: December 6, 2001

Attorney Docket No.: ST-UCSD3140

9-10. (Cancelled)

11. (Previously Presented) The nucleic acid molecule of claim 2 further comprising a linker domain encoding a peptide of at least one amino acid that links the CD154 Domain III to the TNF α Domain IV.

12. (Previously Presented) The nucleic acid molecule of claim 2, comprising a nucleotide sequence consisting of SEQ.IID. NO. 1.

13. (Cancelled)

14. (Withdrawn) A chimeric TNF α , comprising a Domain III fragment of a tumor necrosis factor ligand other than TNF α lacking a matrix metalloproteinase cleavage site and a Domain IV fragment of TNF α that binds to a TNF α receptor.

15. (Cancelled).

16. (Withdrawn) The chimeric TNF α of claim 14 that is less susceptible to cleavage from the surface of cells than native TNF α .

17. (Withdrawn) The chimeric TNF α of claim 16, wherein the cleavage rate of the chimeric TNF α is at least 90% less than that of native TNF α .

18. (Withdrawn) The chimeric TNF α of claim 14, further comprising a Domain II fragment of the other tumor necrosis factor ligand.

Attorney Docket No.: ST-UCSD3140

19. (Withdrawn) The chimeric TNFa of claims 14 or 18, further comprising a Domain I fragment of the other tumor necrosis factor ligand.

20. (Withdrawn) The chimeric TNFa of claims 14, 18 or 19, further comprising a fourth Domain IV fragment of the other tumor necrosis factor ligand.

21. (Withdrawn) The chimeric TNFa of claim 14, wherein the other tumor necrosis factor ligand is selected from the group consisting of CD154, CD70, Fas ligand, NGF, CD30, TNF β , 4-1BBL and TRAIL.

22. (Cancelled)

23. (Withdrawn) The chimeric TNFa of claim 14, wherein the Domain IV fragment lacks a cleavage site of TNFa protein.

24. (Withdrawn) The chimeric TNFa of claim 14, comprising domains I, II and III, of a tumor necrosis factor ligand selected from the group consisting of CD154, CD70, Fas ligand, NGF, CD30, TNF β , 4-1BBL and TRAIL, and domain IV of TNFa protein.

25. (Withdrawn) The chimeric TNFa of claim wherein one or more of the domains I, II and III are of CD154 protein.

26. (Withdrawn) The chimeric TNFa of claim 14, further comprising a linker domain encoding a peptide of at least one amino acid that links the Domain III fragment to the Domain IV fragment.

27. (Previously Presented) An expression vector, comprising the nucleic acid molecule of claim 2.

28. (Original) An expression vector, comprising the nucleic acid molecule of claim 3.
29. (Previously Presented) An expression vector, comprising the nucleic acid molecule of claim 4.
- 30-31. (Cancelled)
32. (Original) The expression vector of claim 27, further comprising viral DNA or bacterial DNA.
33. (Previously Presented) The expression vector of claim 32, wherein said viral DNA is selected from the group consisting of adenoviral DNA, retroviral DNA, or retroviral RNA.
34. (Previously Presented) The expression vector of claim 32, wherein at least a portion of the vector comprises adeno-associated viral DNA.
35. (Original) The expression vector of claim 27, further comprising a promoter region.
36. (Original) The expression vector of claim 27, further comprising a polyadenylation signal region.
37. (Previously Presented) A genetic construct comprising the nucleic acid molecule according to claim 2 operatively linked to a promoter sequence and to a polyadenylation signal sequence.
38. (Original) A host cell, comprising an expression vector according to claim 27 or a genetic construct according to claim 37.
39. (Original) The host cell of claim 38, wherein the cell is a mammalian cell.

40. (Original) The host cell of claim 39, wherein the cell is a tumor cell.
41. (Original) The host cell of claim 39, wherein the cell is an antigen presenting cell.
42. (Cancelled)
43. (Withdrawn) A method for increasing the concentration of a ligand capable of binding to a TNFa receptor on the surface of a cell, comprising introducing into the cell a nucleic acid molecule encoding a chimeric TNFa polypeptide according to claim 2, whereby the chimeric TNFa polypeptide is less susceptible to cleavage from the surface of the cells than a TNFa protein.
44. (Withdrawn) The method of claim 43, wherein the comprises an expression vector according to claim 27 or a genetic construct according to claim 37.
45. (Withdrawn) The method of claim 44 wherein the cell is a mammalian cell.
46. (Withdrawn) The method of claim 44 wherein the cell expresses a TNFa receptor on its surface.
47. (Withdrawn) A method for inducing apoptosis of a cell expressing a TNFa receptor, comprising introducing into the cell an encoding a chimeric TNFa polypeptide according to claim 1 or claim 2 wherein the chimeric TNFa polypeptide is expressed on the surface of the cell.
48. (Withdrawn) A method for inducing activation of an immune system cell, comprising introducing into the cell a nucleic acid molecule encoding a chimeric TNFa polypeptide according to claim 2 wherein the chimeric TNFa polypeptide is expressed on the surface of the cell.

Attorney Docket No.: ST-UCSD3140

49. (Withdrawn) A method for treating neoplasia in a patient comprising introducing into a neoplastic cell a nucleic acid molecule encoding a chimeric TNFa polypeptide according to claim 2 wherein the chimeric TNFa polypeptide is expressed on the surface of the cell.

50. (Withdrawn) The method of claim 49 further comprising: obtaining the neoplastic cell from a human patient; infusing the neoplastic cell back into the patient after having introduced into the cells the nucleic acid molecule encoding the chimeric TNFa polypeptide.

51. (Withdrawn) A method of treating neoplasia comprising directly injecting into a tumor bed of a patient the nucleic acid molecule encoding a chimeric TNFa polypeptide according to claim 2 wherein the chimeric TNFa polypeptide is expressed in the tumor bed.

52-61. (Cancelled)

62. (Withdrawn) A chimeric TNFa ligand polypeptide, comprising a Domain III fragment of a tumor necrosis factor ligand other than TNFa, wherein the fragment is a homolog of a cleavage site of native TNFa, and a Domain IV fragment of TNFa protein that binds to a TNFa receptor.

63. (Withdrawn) A method for inducing apoptosis of a cell expressing a TNFa receptor, comprising introducing into the cell an encoding a chimeric TNFa polypeptide according to claim 52 wherein the chimeric TNFa polypeptide is expressed on the surface of the cell.

64. (Withdrawn) A method for inducing activation of an immune system cell, comprising introducing into the cell a nucleic acid molecule encoding a chimeric TNFa polypeptide according to claim 52 wherein the chimeric TNFa polypeptide is expressed on the surface of the cell.

65. (Withdrawn) A method for treating neoplasia in a patient comprising introducing into a neoplastic cell a nucleic acid molecule encoding a chimeric TNF α polypeptide according to claim 52 wherein the chimeric TNF α polypeptide is expressed on the surface of the cell.

66. (Withdrawn) The method of claim 65 further comprising: obtaining the neoplastic cell from a human patient; infusing the neoplastic cell back into the patient after having introduced into the cells the nucleic acid molecule encoding the chimeric TNF α polypeptide.

67. (Withdrawn) A method of treating neoplasia comprising directly injecting into a tumor bed of a patient the nucleic acid molecule encoding a chimeric TNF α according to claim 52 wherein the chimeric TNF α polypeptide is expressed in the tumor bed.

68. (Previously Presented) A process for producing a chimeric TNF α ligand polypeptide of claim 2 comprising culturing a host cell of claim 38 under conditions suitable to effect expression of the protein.

69 -75. (Cancelled)

76. (Previously Presented) The nucleic acid molecule according to Claim 2, wherein the encoded chimeric polypeptide is about 90% less susceptible to cell membrane cleavage into soluble TNF α than are native TNF α and TNF α lacking the metalloproteinase cleavage site present from Val77 to Pro88 of native TNF α .

77. (Previously Presented) An expression vector, comprising the nucleic acid molecule of Claim 76.
